

CANADACAP™

WOUND IRRIGATION SHIELD

- Fits On Saline Bottles
- Built In Shield
- Faster than Syringes
- Safer than Poking Bottles
- Improve Productivity
- Reduce Turnaround Times
- Better Wound Care
- Kid Friendly
- 8 PSI

CANADACAP™

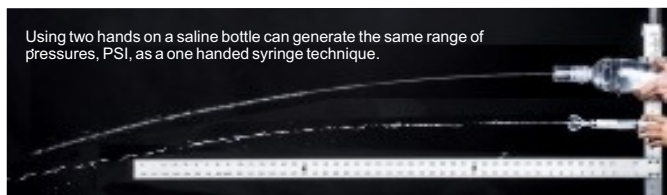

WOUND IRRIGATION SHIELD

The CanadaCap is faster and easier to use than tedious syringe shields. The built-in shield protects against splatter and the built in nozzle provides more force than bottles punched with a needle. The ease and effectiveness of the CanadaCap helps ensure that optimal wound care with large volumes of irrigation fluid will get done. The reduction in treatment times, supply consolidation and the reduction in staff resources; make the CanadaCap extremely cost effective. Contact us for more info.

Twist the CanadaCap on a saline bottle. Squeeze the bottle and deliver high volumes of fluid directly from the bottle to wounds in **seconds** without refilling! Squeezing with two hands you can generate 8 PSI just like a syringe. Direct much more volume and **force** to the wound, due to the wide stream from the CanadaCap. Non-sterile. For single patient use only. For single use only. For minor wounds only. For professional use only.

Use to Irrigate:

- Lacerations
- Road Rash
- Puncture Wounds
- Dressing Changes
- Chronic Wounds
- Decontamination
- Burns
